

Java

```
class Solution {  
    public int networkBecomesIdle(int[][] edges, int[] patience) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} edges  
 * @param {number[]} patience  
 * @return {number}  
 */  
var networkBecomesIdle = function(edges, patience) {  
  
};
```

TypeScript

```
function networkBecomesIdle(edges: number[][], patience: number[]): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    int networkBecomesIdle(vector<vector<int>>& edges, vector<int>& patience) {

    }
};
```

C#

```
public class Solution {
    public int NetworkBecomesIdle(int[][] edges, int[] patience) {

    }
}
```

Kotlin

```
class Solution {
    fun networkBecomesIdle(edges: Array<IntArray>, patience: IntArray): Int {

    }
}
```

Go

```
func networkBecomesIdle(edges [][]int, patience []int) int {

}
```
